Rings

Every mark, number and track on a dial is a ring.
A ring repeats one kind of thing round the centre, at one radius.

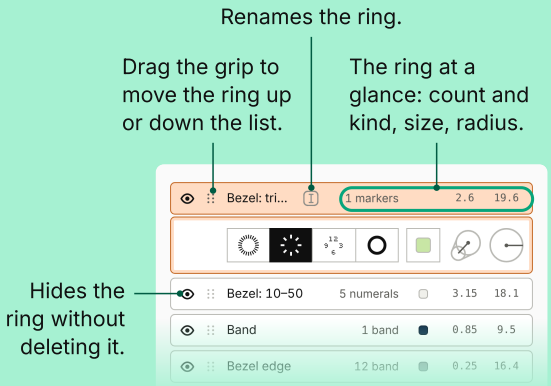

Ticks. Lines, as on a minute track.

Markers. Heavier shapes, usually for the hours.

Numerals. Numbers or words, in any font.

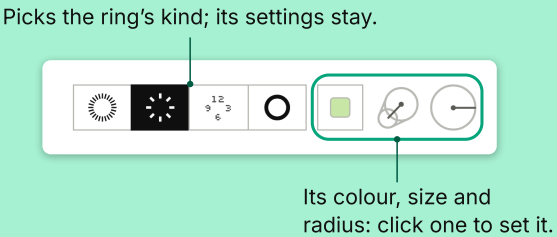

Band. Flat colour, whole or in pieces.

Stacking order. The list is the stacking order: the top ring is drawn last, over the ones below it. Hide a ring to see what it covers.

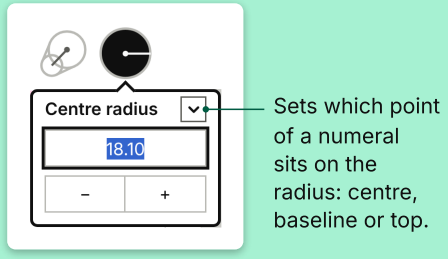

⚠ **Watch.** A ring gives way only to rings above it, so moving it up or down the list can add marks or take them away.

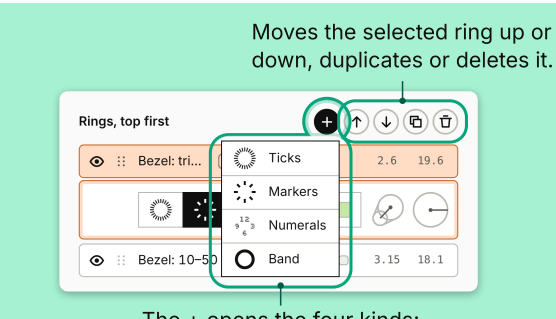

The ring drawer. It opens under the selected ring's row. Click a value button to type a number, or press it and drag: right or up raises the value, and Shift makes each step finer.

One ring, one row. Each ring is one row in the list, drawn at one radius. This diver has eleven, and every label on it names the setting that makes that ring.

⚠ **Watch.** A ring's radius runs from the centre to the outer edge of ticks, markers and bands, and to a numeral's anchor: its middle, its baseline or its top.

Adding and arranging. A new ring or a copy goes in above the selected ring and becomes the selected one. New numerals take the type of those already on the dial.

⚠ **Watch.** Delete asks nothing first; undo brings the ring back with its settings.
