Rings

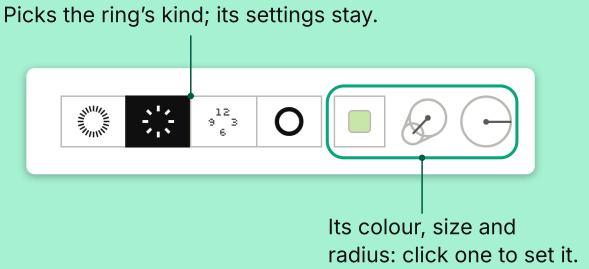

Every mark, number and track on a dial is a ring.
A ring repeats one kind of thing round the centre, at one radius.

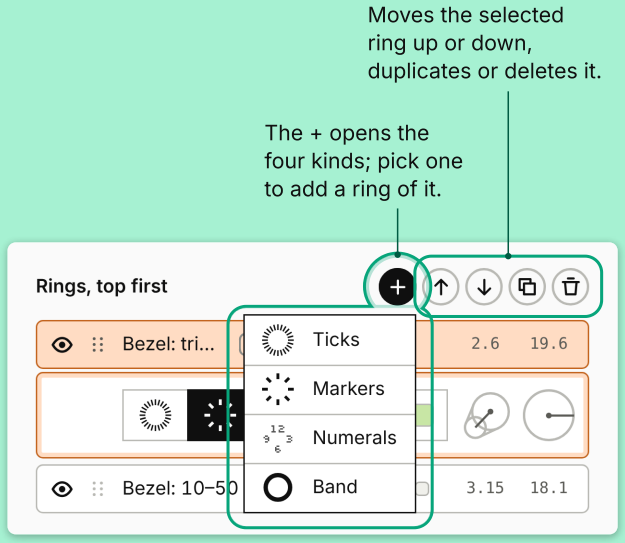

Four kinds. Ticks are lines, as on a minute track. Markers are heavier shapes, usually for the hours. Numerals are numbers or words. A band is flat colour, whole or in pieces. A ring can change to another kind at any time, and it keeps all of its settings when it does.

Stacking order. The list is the stacking order: the top ring is drawn last, over the ones below it. Hide a ring to see what it covers.

⚠ **Watch.** A ring gives way only to rings above it, so moving it can bring marks back or take them away. Hidden, a ring is neither drawn nor exported, and no ring gives way to it.

The ring drawer. It opens under the selected ring's row. Click a value button to type a number, or press it and drag: right or up raises the value, and Shift makes each step finer.

Adding and arranging. A new ring or a copy goes in above the selected ring and becomes the selected one. A new numerals ring takes its type from the numerals already on this dial, so they match.
