Rings

Every mark, number and track on a dial is a ring.
A ring repeats one kind of thing round the centre, at one radius.

Ticks. Lines, as on a minute track.

Markers. Heavier shapes, usually for the hours.

Numerals. Numbers or words, any font.

Band. Flat colour, whole or in pieces.

The five rings together, as the tool draws them.

What makes a ring. A kind, a set of positions (how many, where the first sits, how far they spread, which ones are used), a radius, a size and a colour. Every other setting in the Rings tab refines one of these.

Reading a row. After the name come how many and of what kind, the colour, the size of one mark and the radius, in the unit you chose. The selected row opens its drawer to change them.

Giving way. A ring can skip its positions where rings above it have marks, or cut a gap round them. That is how the minute track makes room for the dots, and the bezel's ticks for its numerals.

Drawing order. The list is drawn from the bottom up, so the top row ends up in front. Drag a row by its grip to move it; hide it with its eye to see what it covers.
